

# Countertop Dishwasher

## FreshCUP™

### PRODUCT DESCRIPTION:

**FreshCUP™** is the micro washer specially designed to clean and sanitise wash items in any workplace in just **30 seconds** - and it is also perfectly sized and attractively designed to suit home kitchen countertops.

Cups, mugs and utensils in the office are an ideal breeding ground for micro-organisms. Food leftovers (particularly milk and juices), moisture and room temperature cause microbe, bacteria, mould, yeast and fungi growth. With viruses needing exposure to temperatures over 60°C, for at least 5 minutes or more to be killed, this makes manual sink-washing the least safe and least effective way to wash items at home or work. Now, more than ever, we need simple, effective, fast solutions for home and workplace hygiene.

Because of its size and efficiency, **FreshCUP™** is perfect for any location where people drink hot and cold beverages – from offices to workshops, care institutions to barber and hair salons, cafés to trade shows.

At the heart of the system is the patented 1.2 **FreshCUP™** BIOCLEANSER Detergent, a unique mix that sanitises as it washes and polishes. The detergents are 100% biodegradable and contain no phosphates or silicates, making it environmentally gentle in use.

### DIRECTIONS FOR USE:

Operating **FreshCUP™** couldn't be simpler. Just place the cups and other utensils in the dish rack and spoon basket and press a button. In seconds, everything's clean! See user manual for full instructions.

FEATURES	BENEFITS
Effortlessly cleans & sanitises in 30 seconds	No more full sinks. No more waiting to fill the dishwasher before turning it on. Improves the quality of office life and reduces the potential for contact contamination and illness.
100% biodegradable, highly concentrated detergents	No phosphates or silicates. Tough on germs but gentle on the environment and the budget, as each snap-in cartridge lasts around 600 washes
Easy to change, recyclable cartridges	No waste, no mess, safe and easy to store, minimises single use plastics and reduces landfill.
High quality construction and components	Built to handle frequent heavy duty washing and heat water fast, allowing wash items to dry quickly by evaporation, reducing the need for manual drying.
